LEGEND

- Private Land
- Existing Roads
- Proposed Roads W/Road Closure
- BEACH — Timber Sale Area and Name
- Clearcut Harvest Units
- Partial Cut Harvest Units

ALTERNATIVE C Implementation Overlay

This overlay is intended to be used to supplement Alternative C, the selected alternative. Roads and harvest units are identified as they are layed out on the ground. The data base as identified for Alternative C has been refined to meet on-the-ground conditions, thus there are slight alterations between the Alternative C base map and this overlay. Approximate locations for road closures after project completion are also identified on this overlay.

Outputs

131 million board feet (gross merchantable volume) of timber will be harvested, including 2,375 acres through regeneration harvest and 1,565 acres by partial cut. 13.2 miles of new roads will be constructed.
